

# Sunbather Pool Technologies

## Solar Heating

To SAVE energy,  
and SAVE money.  
Choose SOLAR.

### Why choose solar?

1. No running costs.
2. No greenhouse gas.
3. Longer operating life.
4. Fewer parts to break down or wear out.
5. It's nature's way!

## Electric heating = costs.

An electric pool heater may let you swim all year but it costs money to run every day, every year, for the life of the pool. And actually, very few people want to swim in winter, even if the pool is warm, so most electric heaters stay turned off all winter.

Which is why solar makes so much sense.

First the Sun makes us want to swim and then gives us free energy to warm the pool. It's the perfect combination.

## The Sun's energy is free, forever!

Solar can double the months you swim and the hours you swim each day, making evening pool parties and morning swims a delight.

Unlike electric heating, solar is free - so there no nasty surprises in your monthly energy bill. And that can't change. No-one owns the Sun. It can't be regulated, bought or sold. It's free forever.

## Reduce your carbon footprint.

Solar pool heating is part of the environmental movement's drive to reduce carbon emissions.

With heat pumps, for example, high electricity bills show only a part of the fuel energy they actually consume. 70% to 80% of a coal-fired power station's energy is lost before it reaches the heater.

So for every kilowatt the heater uses, four are wasted. That's expensive. In fact, it could cost the earth.

## The choice is yours!

Solar pool heating is the most environmentally responsible option. It's the cheapest to run for the life of the pool. It's the longest lasting with few moving parts to break down or wear out.

It's simple to install and it doesn't take up valuable plant room space.

And with Sunbather solar, you even get a choice of colours to match your roof. Solar? It's the right choice and it's your choice.
