

Sunbather Pool Technologies Security Blankets

Peace of mind is automatic

For over 25 years Sunbather engineers have been designing and manufacturing pool heating and heat retention equipment of world standard. Now they have developed a product so advanced that even they are amazed.

Safer, cleaner, warmer, more valuable, more attractive, easier to use...

The Sunbather Security Blanket is a state-of-the-art pool cover system, with a list of benefits so comprehensive there is almost nothing more a pool owner could wish for.

Security Blanket is only limited by the laws of physics.

The Security Blanket is designed for geometric pools, although some curves, swim-outs and steps can be covered.

*In Australia at this time, the SASB does not replace the need for the security fence around your pool. It should not be relied on as a safety cover. Adult supervision is essential whenever children are inside the pool enclosure.

**When the SASB is fitted to an existing pool, security benefits are only achieved if side rails also be fitted.

As the name implies, this really is a 'security' blanket.

The cartoon character Linus had a "security blanket" that gave him peace of mind and now, so can you. In the unlikely event that an animal or a little toddler strays onto the pool when you're not around, the Security Blanket's rigid floating slats will easily support their weight**. And for added security, a key-lock operating mechanism on automatic models ensures that nobody can get into the pool without your consent.

Security is a global issue as well!

All heating systems, except solar, produce 'greenhouse gases' and since the Security Blanket reduces fuel consumption, it helps reduce the production of those gases as well. So if you are a conservationist at heart and your pool is heated, the Security Blanket may help you secure the planet's long-term future by helping you reduce Australia's greenhouse gas emissions.

Security key-lock operation.

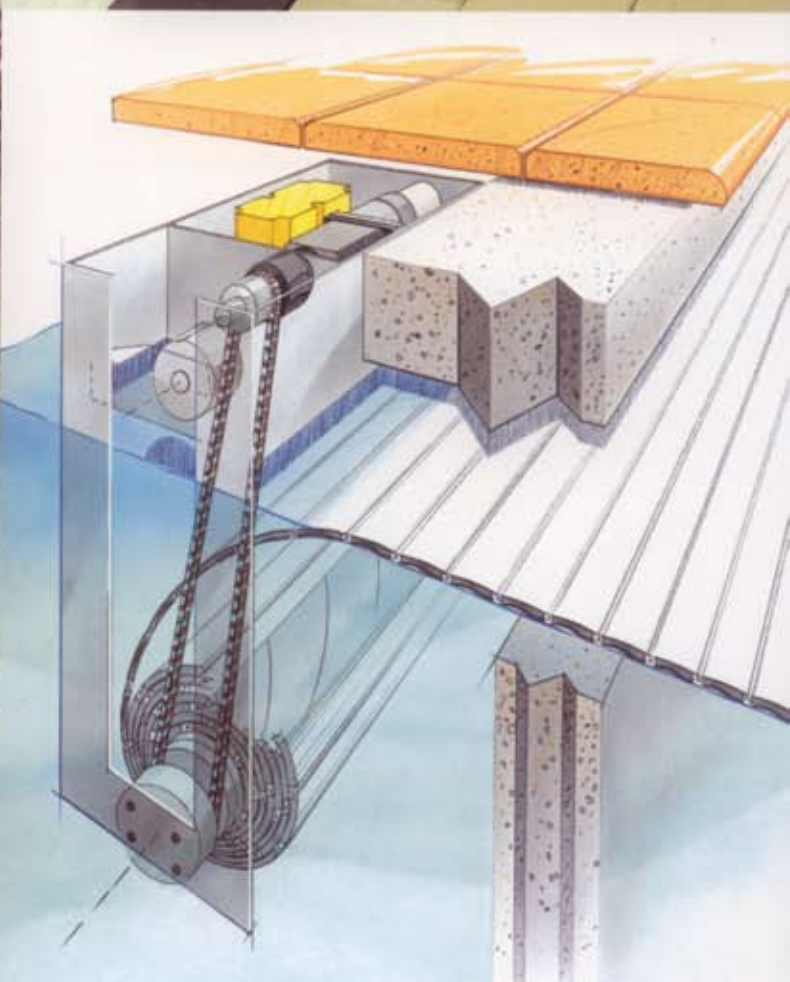

Every slat divided internally for buoyancy.

End-caps seal each slat and protect pool sides from wear.

Durability, style and convenience

On the pool, a Sunbather Security Blanket has a sculptured, stylish look, but its beauty is more than skin deep. Every slat is divided internally into a number of rigid chambers and sealed for buoyancy.

For new pools, the in-ground SSB-1 system is perfect.

The SSB-1 is almost invisible. On the pool it's clean and smooth. Fully retracted, it completely disappears into a slot at the end of the pool.

A solid beam spans this slot and, ideally, this end of the pool should be slightly elevated.

This allows the surface of the water on the other three sides to be brought up as close to the level of the surrounding deck as you wish.

Colour options.

All SSB models are available in four standard slat colours, white, cream, beige and grey. Slat can also be ordered in a wide range of decorator colours, including clear, if required.

Everything is automatic.

The SSB-1 is fully remote controlled. Simply insert and turn the key. After that, everything is automatic. That key engages the drive mechanism's high torque motor.

From there, stainless steel wheels, cogs and self-lubricating fittings silently glide the cover over the pool.

To achieve all this however, the SSB-1 needs to be installed as the pool is being constructed.

For most existing pools, SSB-2 is the right answer.

The SSB-2 above-ground model has clean lines and a smooth, solid feel. It can be retrofitted to an existing geometric pool in less than a day. In all other respects, it is the equivalent of the in-ground model**. It's also motor-driven with automated control so extending and retracting it only requires the flick of a switch.

For smaller pools, SSB-3 provides another option.

Large covers need to be motor-driven for safety and precision.

The SSB-3 was designed to offer a manually operated smaller cover. It may be small and not automatic, but its list of benefits is just as impressive.

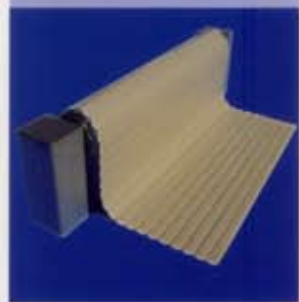

The price may be lower but the quality is still the same.

The big, solid winding wheel gives the same feeling of style and strength, and its design integrity typifies the engineering behind every Security Blanket model.

**When the SASB is fitted to an existing pool, security benefits are only achieved if side rails also be fitted.

SSB-3

SSB-2

It can be a self-funding investment!

On a gas-heated pool, a Security Blanket can dramatically reduce your gas bill. So much in fact, that after 5 to 6 years you will have saved more on your gas bill than the original purchase price of the Blanket. In other words, it can pay for itself in less than 6 years.

You may be a 'greenie' but your pool shouldn't be.

On outdoor pools, Security Blanket slats interlock so they help keep leaves, dust, litter and even those pesky ducks out of the pool. They even stop light getting through. And without light, there's no chance of the algal build up over winter that can turn your pool green.

And an indoor pool shouldn't be a greenhouse either.

On indoor pools the Security Blanket will dramatically reduce evaporation. That in turn reduces condensation and the corrosion it causes.

Graph represents two identical pools subjected to the same climatic conditions over a period of 14 days. Both pools are solar heated, with controllers set to 30°C.

Guarantee

Sunbather is designed and manufactured up to a standard, not down to a price. So often, a warranty is little more than a sales gimmick. As both a designer and manufacturer, Sunbather has always focused on creating products of the highest quality and durability. And after doing it for over 25 years, we know how to do it well. That's why every Sunbather product carries a warranty that really means something.

Whether you're interested in a complete solar heating system, an accessory, or the ultimate in pool security covers, you'll find each Sunbather product carries a warranty that is a promise of quality and support that we intend to keep.
